Wafer Batter Mixers

Model - "BM-3 RS"

...for Rolled Sugar Cone plants

...better Mixers, better Products

BATTER MIXING

R&D Engineers has a series of mixing plant depending on the capacity of the batter required to be made.

Primary requirement for the production of quality batter is that all ingredients must be fully mixed together so that the batter will be homogeneous.

The particularly careful mixing procedure is achieved by the strong vertical currents induced in the batter. In the mixer center, the batter is induced to flow in the downward direction; on the periphery, the batter then flows in the upward direction.

The Batter Mixer is used for the fully automatic production of batter for feeding one or more Baking Plants either manual/automatic. Consistent batter is required for quality products(rolled cones/cups).

The age of the batter or the time between mixing and use, has also a marked and effect on the sheet quality. To ensure that the Automatic Wafer Baking Machines are being supplied with batter that is always fresh, it is important to prepare smaller batches at a time.

FEATURES OF BM-3 RS

BM-3 RS is designed to produce a high sugar content batter specifically for "Rolled Sugar Cone Plants". It is a open top feed arrangement, with under the tank agitator turbine.

It can effectively supply batter in smooth, lump free condition for better Sugar Cone production.

* Please refer to our Catalogue : Batter Mixer / Plant for other mixing systems

TECHNICAL SPECIFICATION

Batter Mixer	BM-3 RS
Tank Capacity	100 lts
Connected load in Kw (3 phase)	3.2
Length	1170
Width	660
Height	1270
Net Weight (apprx)	115 Kgs

*Modifications Reserved

We are constantly guided by our principle of offering our customers better and better machines; to give increased efficiency and higher levels of automation. The technical data and illustrations are subject to change without notice
